

1. Attach the 1-1 drawing to the wall with some tape and drill the holes through the drawing in the wall.

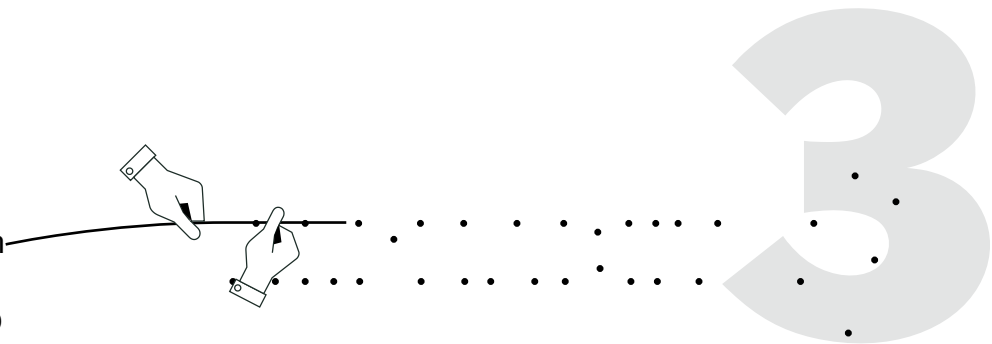

2. Screw the sign-nibs into the wall.

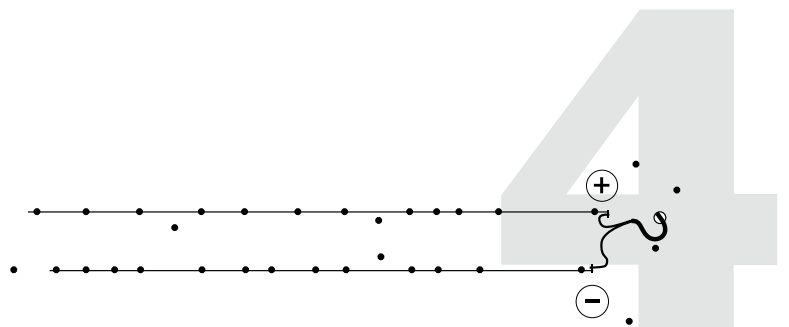

3. Put the wire through the top and bottom sign-nib for the power supply.

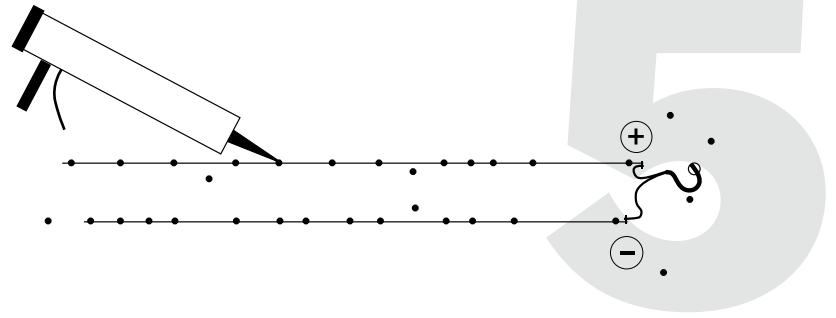

You can extend the wires with the supplied connectors. Be sure to put each wire half into the connector.

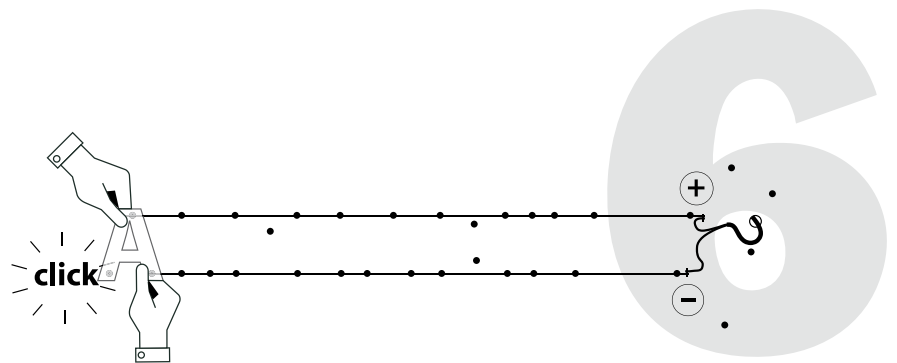

4. Place the transformer somewhere inside and attach it to the wire with the supplied clams. Connect the transformer to the 220V power.

5. Put some silicons in the sign-nibs to avoid moist in the electrical connections.

6. Put the signs on the sign-nibs with a firm hand. They will lit directly if they are properly placed with a 'click'.

7. If all signs are placed at the sign-nibs, you are ready, enjoy...

**Best use:** Turn the sign on just 1 hour before sundown and turn it off when everybody is asleep. During the winter-period you can turn the sign on at 6 AM and turn it off around 9 AM. With this ritm the sign will last years longer.

**Maintanance:** Just clean the sign every year with some water and a soft towel.
